Accounts Payable Execution Summary

Bizzi AP Data Analysis

$1.24M
Total spend

50.00 %
Late %

5 days 4 hours
Avg Approval Time

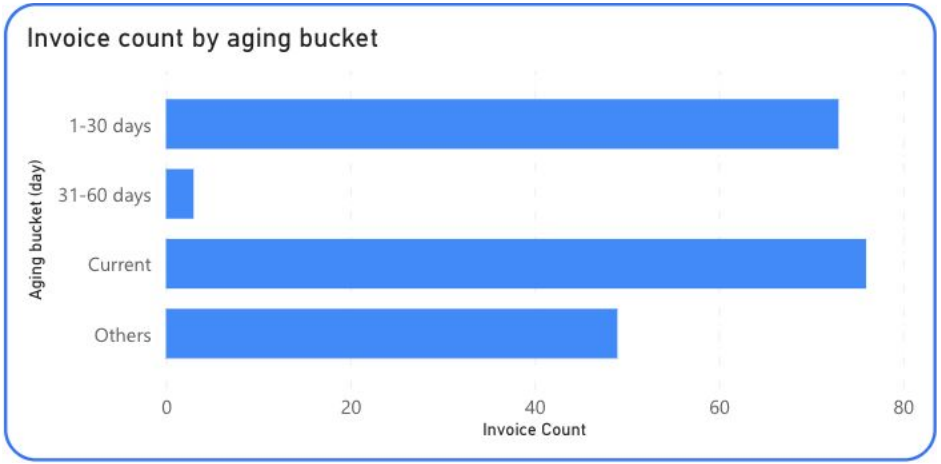
Metric	Value
Total Spend	$1.24M
Late Payment Rate	50%
Average Approval Time	~ 5 days

Business Impact:

The AP process shows high late payment rates and moderate approval delays, indicating operational inefficiencies in invoice processing.

Invoice Aging Risk

Distribution of invoices by aging bucket



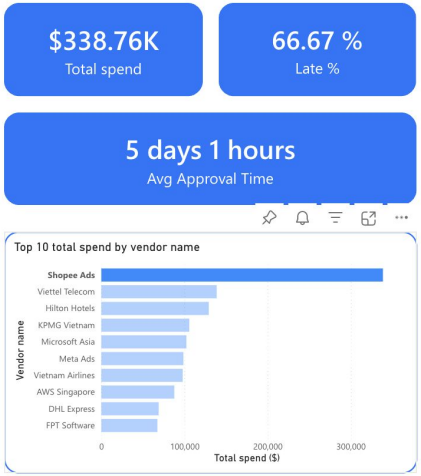
- ➔ 50% of invoices are overdue, indicating potential inefficiencies in the AP payment process.
- ➔ Delays in invoice processing increase the risk of late payments

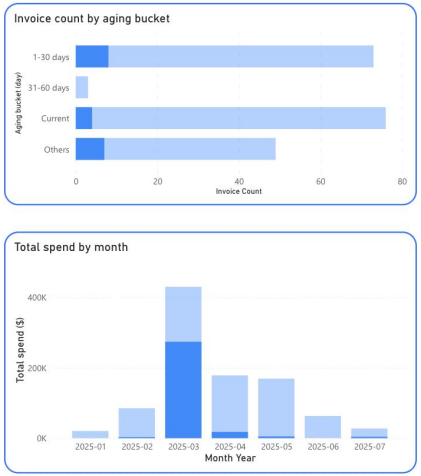
Business Risk:

Poor invoice aging management may lead to financial penalties and reduced vendor trust

Vendor Spend Concentration

Top Vendor Analysis





- ➔ Shopee Ads vendors for approximately $338K in spending (nearly 25% of total vendor spend)
- ➔ Spending peaked in March 2025 (~$274K)

Business Risk:

Heavy dependence on a single vendor increases financial and operational risk

Operational Issues

Data quality issues explore

- ➔ 11 invoices were paid before approval,
- ➔ 47 invoices have missing paid_value values
- ➔ 1 invoice has a missing due_date
- ➔ 1 invoice shows a negative amount, possibly representing a credit note

Business Risk:

These issues increase the risk of financial reporting errors and operational inefficiencies

Recommendations

Analytics features improvements for Bizzi

- ➔ Automate AP workflow monitoring to track approval delays across departments
- ➔ Create alerts for invoices approaching due dates
- ➔ Build predictive analytics models to identify invoices at risk of late payment based on historical data.
- ➔ Continuously monitor vendor spend concentration and vendor payment performance
- ➔ Develop a centralized AP performance dashboard to track approval time by department, late payment rates, invoice aging distribution, and vendor spend concentration

Business Risk:

These issues increase the risk of financial reporting errors and operational inefficiencies
